If your focus is on the diagram itself, there are two big differences between diagrams about domain model and diagrams about design model: (At least this is what the Larman book Applying UML and Patterns says). In UML diagrams which represent domain model, you cannot use arrows. All classes are interlinked with a line, which signifies "relation", and you should use text annotations over the ...

What is the difference between a domain class diagram and ... Although Dan North, who first formulated the BDD approach, claims that it was designed to address recurring issues in the teaching of TDD, it is clear that BDD requires familiarity with a greater range of concepts than TDD does, and it seems difficult to recommend a novice programmer should first learn BDD without prior exposure to TDD concepts

Deluxe - Products and Services for Small Businesses and ... "The key abstraction of information in REST is a resource. Any information that can be named can be a resource: a document or image, a temporal service (e.g. "today's weather in Los Angeles"), a collection of other resources, a non-virtual object (e.g. a person), and so on.
