Access PDF Linux Cluster Howto Tldp

A computer cluster is a group of linked computers, working together closely so that in many respects they form a single computer. Clusters are generally connected by a fast Local Area Network. Parallel programs that run on one of the nodes uses the processing power of all the nodes and produces the result.

Access PDF Linux Cluster Howto Tldp

The use of this API is well described in the "Linux Kernel Procfs Guide" distributed with the Linux kernel source code. Therefore we give here only a very basic example: A module which creates a directory as well as a file. If your file provides more than PAGE_SIZE bytes of data it is easy to get things wrong.
