Could edge computing be the next big thing? | TechRadar

The first reports broke over five years ago: Michael Dell was planning to take his eponymous technology company off the public market. As reported by Business Insider at the time, annual revenues had only increased by about 2 percent, and a \$2.4 billion net profit in the fiscal year ending in February 2013 turned into a \$1.2 billion loss in January 2015. Dell was still selling computers, but computers alone just weren't enough for the company to survive.
