Topics covered in lectures in 2014 are listed below. In some cases, links are given to new lecture notes by student scribes. All scribed lecture notes are used with the permission of the anonymous student author. The recommended reading refers to the lectures notes and exam solutions from previous years or to the books listed below.

Lecture 16 Electrochemistry: Simple ideas. 4 What is electrochemistry? • Electrochemistry is the science which deals with the consequences of the transfer of electric charge from one phase to another. • An electrochemical reaction is a heterogeneous process which involves electron transfer across a phase boundary or interface.

### [Introduction to Electrochemistry.](#)

In this lecture, the basic principles of redox reactions are introduced. If you want to design the next greatest battery to power your favorite electronic device, you won't want to miss this ...

So, here chloride's going from plus 1 to plus 5, so what's happening to it? Is it being oxidized or reduced? Yup. So it's going from plus 1 to plus 5, so we have an oxidation going on. So to tell whether something is an oxidation or not, you need to figure out what the oxidation numbers are and then see what's changing in the course of that ...

### Lecture 25: Electrochemical Cells | Video Lectures ...

The syllabus, which is described in outline below, is aligned with the following QAA benchmark statements for chemistry at FHEQ Level 7 (Masters). (QAA3.3) to extend students' comprehension of key chemical concepts and so provide them with an in-depth understanding of specialised areas of chemistry ...

Module 5 : Electrochemistry Lecture 24 : Applications of Electrode Potentials. Objectives In this lecture you will learn the following Determination of thermodynamic functions. Estimation of activities of electrolytes. Use emf measurements to determine the solubility product and the solubility of a sparingly soluble salt.

### CHEM6134 | Introduction to Electrochemistry II ...

eCHEM1A. This open-access online general chemistry video repository, offered not-for-credit and free of charge from UC Berkeley, provides students an introduction to the world of chemistry as seen from a broad variety of perspectives. With significant funding from the Camille & Henry Dreyfus Foundation, we have created studio-quality video segments based on Chem 1A, a traditional large ...

### Chapter( 7e) (16) - Module 5 Electrochemistry Lecture 24 ...

Module 5 : Electrochemistry Lecture 25 : Corrosion Objectives After studying this Lecture, you will be able to Outline the electrochemical basis for corrosion. Illustrate the use Pourbaix diagrams Outline the kinetic features involved in the corrosion process

### Lecture 22 - Free energy and EMF - Electrochemistry Notes ...

5. Tying Electrochemistry to Thermodynamics. In electrochemistry, the quantity in which we are most interested is  $E$ , the potential energy of the system. It is the value you see on a new  $E = 1.5\text{V}$  or  $E = 6\text{V}$  battery. We can relate this idea of work done in electrochemistry to the thermodynamic concept of work, free energy, through the equation:
