### PROTRUDING REBAR SAFETY AT CONSTRUCTION SITE | RLS HUMAN CARE

Routinely pick up scrap rebar to prevent trip hazards. When caps are not available, bend rebar over or cap with a 2x4 "L" to protect employees from injury. When rebar is being hoisted "stay clear". Rebar can easily slip out of mats and cages. Cover exposed rebar with the correct protective cap. Cap all rebar that someone could fall on.

In ASCE, I've found a group that truly cares about our built and natural environment."

### Rebar Safety — Construction Center of Excellence

The design of the reinforcing, or "rebar," cage for a drilled shaft is a necessary step in the engineering process. Rebar cages will be considered from two perspectives in this manual: (1) geometry of the steel necessary to resist stresses that develop because of loads applied to the drilled shaft, which is addressed in Chapter 16, and (2) the characteristics of the cage from the ...

### Rebar Cage Construction and Safety: Best Practices ...

Rebar safety. Rebar reinforcement bars are a common part of civil concrete work. Subsequently, rebar safety is an extremely important issue on construction sites. There are two common types of accidents associated with rebar, they are implements and abrasions.
